Küfner – Your specialist for screens, strainers and filters

Küfner is an owner-operated company with three sites in Germany, more than 300 employees and 60 years of expertise in the industry. As a market leader for hybrid filter strainers, we develop and manufacture customized solutions for surface filtration in the form of plastic and metal filters and screens with metal mesh and plastic mesh.

Our screens, strainers and filters for liquid and gaseous media provide protection against contamination and damage for a broad range of equipment with applications in industries as diverse as automotives and medical technology.

[Know-how]²

We know the possibilities and limitations of the materials we use like no-one else. The know-how that is so essential when selecting the right material for your screen or filter solution originates from our second core area of competence, the Küfner Weaving Reed Division – another market in which we are a global leader.

Things simply run smoothly with Küfner!

We supply you with the right solution so that your processes and products run trouble-free and smoothly both on startup and during operation – be the solution a filter screen, strainer or intelligent multifunctional component.

Guaranteeing mobility.

You will find our products in use throughout the automobile and commercial vehicle segments wherever liquids or gases have to be filtered in order to protect sensitive or safety-relevant components against damage or failure:

- Braking systems
- Fuel feed systems
- Engine management systems
- Transmissions
- Hydraulic circuits

Providing effective protection for buildings and the environment.

Our products are put to use in a wide range of applications in the building services/appliances sector and in environmental technology:

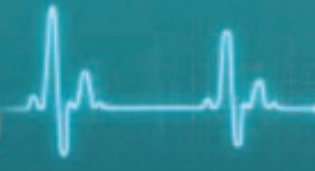

- Bathroom fittings
- Gas supply line fittings
- Domestic appliances
- Water treatment
- Oil heating systems

Keeping machinery clean.

Our filter screens ensure that machines function properly and technical products are manufactured free of particles. They are used, for example, in the following types of equipment:

- Injection moulding machines
- Machine tools
- Printing machines and pasting machines
- Construction machinery
- Hydraulic components

Taking good care of patients.

Küfner develops and manufactures applications for filtering fluids and gases used in medical technology. The primary fields of application for our products include:

- Intensive care medicine/anaesthesia/respiration
- Disinfection/sterilisation
- Emergency services/emergency medicine
- Surgery
- Medical care

Keeping engines running as they should.

Our filtration equipment keeps power tools and equipment running reliably even under the most demanding operating conditions:

- Chain saws
- Brushcutters
- Grinders
- High-pressure cleaners
- Agricultural machinery

Perfecting aerospace.

Applications in the aerospace industry place extremely high technical demands on our filter screens. The very highest of safety standards, combined with extreme load profiles, characterise this product family:

- Space ships
- Aircraft
- Aviation applications

We're happy to help you
